The World's First Trainable AI Trading "MAiMATE" Available from Summer 2020

-- Investment of the Future Handled by AI --

Invast Securities Co., Ltd. (Head Office: Chuo-ku, Tokyo; President & CEO: Takeshi Kawaji) plans to make its AI signal distribution service "MAiMATE" available for real transactions beginning in summer 2020.

The MAiMATE service was designed on the unique concept that "customers create and train the AI themselves." Invast Securities launched the beta version in August 2019 as an FX trading signal distribution service. More than 3,000 types of AI have already been created and trained by the company's customers.

At first, the tradeable asset class for the new MAiMATE will be limited to FX, but the company is aiming for a "multi-asset" service that handles multiple asset classes in the future, so it will be able to handle a variety of asset classes.

The MAiMATE AI can be used free-of-charge by anyone who has an account with Invast Securities. When creating the AI, the customer only needs to select four things: (1) the currency pair, (2) the technical indicators for learning, (3) news information, and (4) growth style. By making these selections, customers create their own unique AI. The created AI learns based on the training method chosen by the customer, who is the "trainer," and grows to become an even more unique AI.

A variety of things are planned for the new MAiMATE, including implementation of a point program that provides benefits to customers who have trained popular AIs. In addition, some customers have indicated that they would like to use the AIs they trained for the beta version for real transactions, so that will be possible as well.

In the future, update information will be released on the MAiMATE website as it becomes available, so be sure to check the website.

■ MAiMATE AI Agent Overall Cumulative Results for 2019 (August 14, 2019 to December 31, 2019)

Through continued learning, each AI agent gained a view of the market and steadily built up profit, resulting in a profit of almost 400,000 pips for the MAiMATE service overall! The number of registered AI agents has also grown steadily, and has exceeded 3,000. The average cumulative profit and loss per AI agent has reached +129.4 pips.

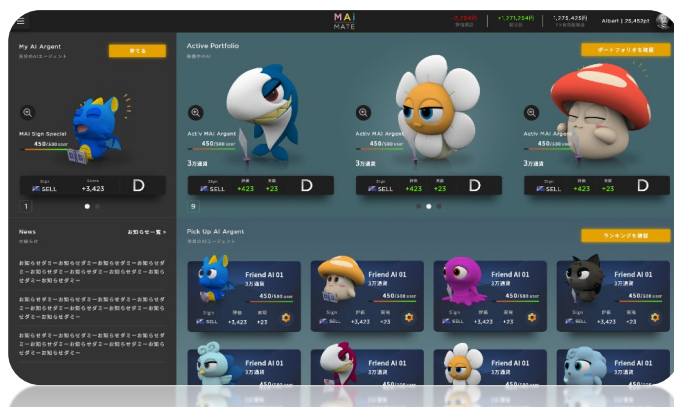

- * "Only the forward test results after the creation of the AI agent" have been extracted.
- * Invest Securities' "TriAuto FX" rate was used for the simulated trade results.
